GREEN BUILDING PROFESSIONALS...

Don't miss out, reserve your stand today!

IN 2009, ENERGAÏA IS DEDICATING AN ENTIRE EXHIBITION HALL TO GREEN BUILDING

Renewable energies and green building: energy efficiency is the key.

Renewable energies provide new energy solutions for construction and renovation of high performance, sustainable buildings. The "Green Building" section will be a showcase for presenting the latest technologies, innovations and trends in the construction industry.

**New or existing buildings – Renovation – Energy performance
High Environmental Quality Buildings (HEQ) – Ecological construction – Urban planning...**

• Exhibitors:

Eco-materials - Structural work - Framework - Roofing - Insulation - Proofing
Ventilation - Air conditioning - Heat pumps - Lighting - Glazing - Light
Aerothermal - Renewable energies - Engineering - Training...

• Visitors:

Architects - Design firms - Public and private contractors
Local authorities - Developers - Building companies - Economists
Management and Strategy consultants - Banks - Public/private companies...

• DERBI

The DERBI national cluster's aim is to innovation, research, training, technological transfer and the development and creation of companies in the renewable energies sector applied to the construction industry on a regional, national and international level. The cluster is located in Perpignan and federates companies, laboratories, universities, training centres, professional bodies, financial organisations, territorial authorities...

• FFB - Fédération Française du Bâtiment (French Building Federation)

The FFB has been an active partner of Energaïa from the very first edition. Within the framework of this year's exhibition it is organising meetings for professional unions, holding sector-based training courses and internal board meetings and will be launching a major communication campaign. The FFB is equally involved in the exhibition conference programme.

• CAPEB (French Artisans Building Federation)

In 2009, CAPEB Languedoc-Roussillon will be celebrating its 25th anniversary. In parallel to this, Energaïa will be hosting a large number of events and conferences relative to the new ECO ARTISAN label.

TALKING ABOUT GREEN BUILDING

Conferences

An international conference cycle, dedicated to green building, will address a rich variety of themes:

- Sustainable construction and sustainable districts: applications further to the 'Grenelle de l'Environnement'?
- Renewable energies, green building, local authorities and funding
- Green building applications in the Mediterranean climate

EFFINERGIE is playing an active role in setting up the conference cycle Green Building

The objective for EFFINERGIE is to provide dynamic promotion for low energy consumption construction for new buildings and renovations and to develop an energy performance set of references throughout France for new and existing buildings.

The CNDB (National Committee for Promoting Wood Products) within the framework of its 'Wood is essential' campaign, will be running conferences dedicated to green building for financiers, council housing contractors and local authorities. These conferences will address the construction of collective housing using wood in France, present construction solutions for new builds and renovation, and also new wood/concrete solutions.

The Eco Maires / Energaia Prize

The Eco Maires (French Mayors Association), within the framework of the 19th Eco Actions Trophy awards, has established the "Energaia-Green Building Prize" and the "Energaia-Renewable Energies Prize".

The Eco Maires federate and represent nearly 1900 communes and local authorities that have placed an environmental approach and sustainable development at the heart of their policy making procedures.

Eco-Maisons Sud de France – Méditerranée (Eco-homes)

Real solutions for optimising energy performance in the home!

Several models of ecological houses will be presented at Energaia. These are showcases for practical applications of renewable energies and energy control procedures (insulation materials, heat pumps, roofing...) as can be seen at the stands throughout the exhibition.

ENERGAÏA 2009, A GLOBAL EVENT!

- 400 exhibitors
- 4 halls, 30 000m² exhibition space
- International conferences
- B to B Business Forum
- Job Forum
- Renewable energies training area
- Innovation Trophies
- Convention EnR Investment

CONTACTS
