Green building: finding appropriate insurance

Deployment of an energy renovation operation requires several professions and also transversal skills: ventilation, heating, roofing, plumbing, electricity and also builders.....and the list doesn't stop there; everything depends on the complexity of the solutions being applied.

Contracts can differ: from classic operations 'per profession' to a global service encompassing all the operations required. In all cases, certain precautions can be taken to ensure a successful operation and optimal application of company guarantees.

SolarEdge's Innovation + Gehrlicher's Experience = Higher yield and easy installation

Gehrlicher Solar AG is a leading German system integrator that has been realizing high-quality photovoltaic solutions since 1994. The company's practical approach is reflected in its own product line and intelligent solutions.

SolarEdge is a provider of a smart PV power harvesting and monitoring system. Its decentralized architecture optimizes the power management of each individual module, decreasing yield loss by partial shading and increasing monitoring quality.

The presentation explains the principles and benefits of this cutting-edge technology and how Gehrlicher and SolarEdge are partnering in order to deploy it. A typical installation will be analyzed that demonstrates the quantitative and qualitative benefits as compared to a centralized inverter. Their cooperation is your success.

Heat pumps, the eco-friendly alternative

As machines designed to collect and make use of locally-available renewable energy, heat pumps have a sphere of activity which goes beyond that of traditional energy sources. They have much to offer in terms of the simplicity and diversity of solutions they can propose for managing energy requirements, particularly heating. Heat pumps are making significant contributions to national initiatives to reduce greenhouse gas emissions thanks to their energy-harnessing capacity and their incredibly diverse and inexhaustible potential scope, putting them among the front-running solutions facilitating sustainable development.
