

SATURDAY 12TH DECEMBER

■ **ALE Montpellier** ■

10.00 – 11.00

Agora 10

Presentation of aerial thermography of Montpellier and its suburbs

In January, the City and Agglomeration of Montpellier carried out an aerial thermography of the area. The results are now available in the form of thermal loss maps of buildings. The local energy agency (ALE), which piloted this operation, will present the conditions under which the measurements were carried out, how to interpret the maps, the potential energy savings and what financial aid is available.

■ **GEFOSAT / CLCV** ■

11.00 – 12.00

Agora 10

Consumer rights relating to and financing available for energy economy projects and renewable energy equipment

The GEFOSAT association will present the various financial packages available nationally and regionally for energy saving projects. The presentation will also include information on consumer rights with regards to contracting with professional for such projects.

Speakers:

Anne RETAILLEAU, GEFOSAT
Vanessa BARO, CLCV

■ **Région Languedoc-Roussillon / ADEME / GEFOSAT** ■

11.00 – 12.00

Espace « C'est pas Sorcier » Hall 10

The Energy Info Zone regional network: 10 agencies available to assist individuals

The Languedoc-Roussillon has a regional network of 10 information points which inform and accompany the general public in the fields of energy savings and renewable energies. The Regional Council and the ADEME will present the activities of the regional network of information points (Espaces Infos Energie) within the Languedoc-Roussillon.

■ **Université Montpellier II** ■

11.00 – 12.00

Agora 6

12.00 – 01.00

Agora 10

Poster Conferences on renewable energies explaining the technologies used

The key idea is to clarify the term 'Renewable Energies' for the general public by offering mini-conferences which offer simple explanations to otherwise scientific terms, led by doctorate graduates from the Languedoc-Roussillon Region. They will make presentations using 'attractive' visual supports and will, in addition, create explanatory, educational models which will be displayed on the 'UM2' stand.

■ **CNDB / ARFOBOIS / CAPEB** ■

02.00 – 03.00

Agora 12

Construction of low energy buildings (LEB) with regional skills and resources

Wood is an aesthetic and ecological material. It also provides an efficient response to the current challenges relating to energy efficient construction. Consequently, regional companies are putting forward wood-based solutions which are adapted to the architecture and climate in the Languedoc-Roussillon. Moreover, in order to develop local employment and

optimise forestry resources, sector professionals are working together on improving understanding and use of regional wood varieties.

■ GEFOSAT ■

02.30 – 03.30

Agora 10

Econ'home project: feedback from the energy evaluations carried out in households from Mèze to Lunel

90 households between Mèze and Lunel benefited free of charge from an independent energy evaluation. These households were able to explore and prioritize actions which could be applied to their homes. What were the energy saving measures applied? What cost for what level of saving? What were the barriers?

Speaker:

Thomas GROS, GEFOSAT

■ Région Languedoc-Roussillon / ADEME ■

03.00 – 04.00

Espace « C'est pas Sorcier » Hall 10

Launch of the regional competition: 'Low energy consumption in private housing – EFFINERGIE'

The Languedoc Roussillon Regional Council and the ADEME, supported by the regional network of Energy Info Zones, are launching a regional competition to encourage the production of 'Low energy consumption, EFFINERGI' private housing.

■ Université Montpellier II ■

03.00 – 04.30

Agora 6

Poster Conferences on renewable energies explaining the technologies used

The key idea is to clarify the term 'Renewable Energies' for the general public by offering mini-conferences which offer simple explanations to otherwise scientific terms, led by doctorate graduates from the Languedoc Roussillon region. They will make presentations using 'attractive' visual supports and will, in addition, create explanatory, educational models which will be displayed on the 'UM2' stand.

■ Association Maisons de Qualité ■

03.30 – 05.00

Agora 10

Sustainable construction and building up long term customer confidence

Maisons de Qualité is an association which selects builders of individual housing. It currently represents over 70 approved builders in France and 6 of these are located in the Languedoc-Roussillon: Villas Nimazur, 2A Villas, Le Mas Occitan, Maisons Boivel, Maisons Serge Olivier, Toits de France.

The association has a reference charter which lays out the conditions required for companies to become 'approved' members. These specifications have been drawn up in collaboration with consumer associations and Association member companies.

The conference will offer a presentation of the 'Maisons de Qualité' Association and provide an insight into what an 'ecological' home can represent in terms of respecting the environment, low energy consumption and limited running costs!
